Application No. 10/699.274

I. PROPOSED Amendment to Independent Claim 1

Independent Claim I

- 1. (currently amended) A sterilization container system comprising:
 - an sterilization enclosure defining an interior volume;
 - an upwardly facing surface in the interior volume;
- a flexible elastomeric <u>sterilization</u> mat having a downwardly facing surface resting upon the upwardly facing surface, <u>wherein the sterilization mat is configured to support at least one</u> <u>medical instrument thereon</u>; and

a pattern of ridges extending from the downwardly facing surface, wherein the pattern is such that no fold line can traverse the <u>sterilization</u> mat from one side to the other without intersecting at least one ridge.
